

Retroseal Roofseal Steel

Patent protected

Available in Monoclad, Trimdeck **Order Code 7()** & Corrugated **Order Code 8()**

Specify roof pitch as last number of code.

Is a two piece all steel, Zincalume coated flashing that fits under the overhanging roof sheet where the profiles are open and behind the gutter and that acts as a vermin and bird barrier. Also helps control gutter overflow into the building in storms or where the gutter is blocked. The primary angle piece blocks off the wall sheet cavity (purple arrow on diagram). Most importantly acts as a shield to help prevent burning embers entering the building through the open profiles wall or roof when leaves and debris catch fire during the fire season

green colour used for clarity
